

DAVID S. FARRELL

EDUCATION

Associates Degree
Architectural & Engineering Design
Southern Maine Technical College

Mr. Farrell is a senior designer with Mohlin & Company. He is responsible for the development and utilization of all the drafting standards in our office and is our most experienced designer utilizing Revit.

Since joining our firm Dave has participated in many significant projects including a large sports facility in Alabama and a large bottling plant in New York. Both projects involved significant foundations and long span roof framing. Utilizing base sheets from the architect, Dave developed all the foundation plans and details as well as all steel framing plans, elevations and details. He also coordinated all the MEP input to insure that the steel framing met the requirements of the HVAC and electrical equipment and all plumbing needs.

Dave's most recent experience involved the design of a wood fired power plant for a Veterans Administration project in upstate New York. Dave acted as senior designer, developing all the structural drawings including foundations and building structure as well as coordinating the architectural and MEP requirements. Dave also participated in the construction administrative activities including review of shop drawings and coordinating answers to RFI's in a timely manner.
