

GLENN L. SMITH

EDUCATION

Computer Aided Design
York County Technical College

As senior designer, Glenn is responsible for the development of all drafting standards at Mohlin & Company. His in-depth knowledge of AutoCAD allows him to produce accurate and detailed drawings which form the basis of Mohlin & Company's reputation of producing a "buildable" set of project drawings.

With over 15 years of experience, Glen brings a practical approach to each project to insure that the engineer's designs are represented in the most productive manner.

Glenn has worked on all types of projects at paper mills, power plants and other industrial facilities. He is especially adept at working on fast track and shut down projects where attention to detail is critical and the project schedule is very short.

In addition to developing outstanding drawings, Glenn also participates in field survey work, obtaining and verifying existing conditions, as well as reviewing shop fabrication drawings and performing construction observation duties.
